Brittany Rietz

PRODUCT DESIGN / PROTOTYPING IN CODE / AI DEVELOPER WORKFLOWS

Pasadena, California · brittanyrietz@gmail.com · b-rietz.github.io · linkedin.com/in/brittany-rietz-513060171

Designer-developer with 4+ years designing and building workflow tools and analytics dashboards in Salesforce for a national homebuilder's sales team. I prototype in code, test with real users, and ship UI to production through a human-checked agentic pipeline. Lately I've been designing for the moments where AI agent tools break down.

WORK EXPERIENCE

Lennar Corporation September 2022 – November 2026
Salesforce Developer / Software Engineer I · Remote
Previously Salesforce Intern · June – September 2022

- **Problem:** Consultants' follow-ups and missing lead data were scattered across records, so they lost selling time hunting for what was due, kept to-do lists outside Salesforce, and left key fields blank. **Solution:** Designed and built a working Lightning Web Components prototype of one prioritized action queue: a contextual detail panel, 1–2 tap completion with auto-advance, missing fields turned into one-step tasks, and gamified progress (daily gauge, weekly points, divisional leaderboards). **Impact:** Demos shaped fields and priorities, and leadership greenlit it for production.
- **Problem:** Tickets were backing up, bugs surfaced late in review and QA, and business rules lived in people's heads. **Solution:** Designed and ran an agentic delivery pipeline in Claude Code, from ticket to tested pull request (sandbox deploy, Apex and Jest tests, browser checks, QA notes), with an agent-maintained knowledge base and human approval before every merge. **Impact:** Roughly doubled my delivery speed, caught problems before pull requests, and teammates adopted it.
- **Problem:** The 500+ consultants, sales managers, and sales users on our CRM Analytics dashboards distrusted numbers that didn't match expectations and struggled to find answers. **Solution:** As a subject-matter expert, observed consultants, corrected calculations, and reworked filters and layout with the product owner. **Impact:** Managers now use the dashboards in team meetings and reviews.
- **Problem:** Weekly sales plans between Area Sales Managers and each consultant weren't tracked. **Solution:** Built an LWC so managers log them from the dashboard they already review. **Impact:** Tracked for the first time, in production.
- **Problem:** Internet Sales Consultants asked repeat support questions and waited on a person for answers. **Solution:** Built an Agentforce AI agent that resolves common issues and briefs them on recent releases. **Status:** Pre-launch.
- Maintained the Salesforce platform: user management and tech-debt reduction.

PROJECTS

- **Warp Factories review inbox**, a self-initiated concept (2026). **Problem:** When several coding agents finish at once, it's hard to tell which pull requests need a careful look. In my own Factories run, the agent's note on what to check was cut off in a two-line summary. **Solution:** Researched a real Factories setup and six agent tools, then designed and built a keyboard-first inbox that sorts agent work by risk and shows what to check first. **Status:** Working prototype. b-rietz.github.io/work/factory-floor.html

SKILLS

Design Workflow and interaction design · Prototyping in code · Design systems (SLDS) · Data visualization · User observation and testing · Figma (basic)

Code JavaScript · HTML/CSS · LWC · Apex · SOQL · SAQL · SQL · Salesforce Flow · CRM Analytics · Jest

Tools Claude Code · Warp Factories · Terminal/CLI · Git/GitHub · VS Code · Jira · Obsidian · Adobe XD

CERTIFICATIONS AND EDUCATION

Six active Salesforce certifications
Agentforce Specialist · CRM Analytics and Einstein Discovery Consultant · Platform Developer · Platform App Builder · Platform Administrator · Platform Foundations

Associate Degree in Psychology
Folsom Lake College · 2020

FILM

First Date · Supporting actor · Sundance Film Festival selection, 2021 (Magnolia Pictures) · Wrote, directed, and produced a 2021 short
